

Resysta[®]
THE BETTER WOOD

WHO LOVES WOOD WILL LOVE RESYSTA!

WHO LOVES WOOD WILL LOVE RESYSTA!

Wood is emotion – hardly any other material conveys as much life and warmth. Resysta is 100% not wood, but it creates the same feeling of comfort.

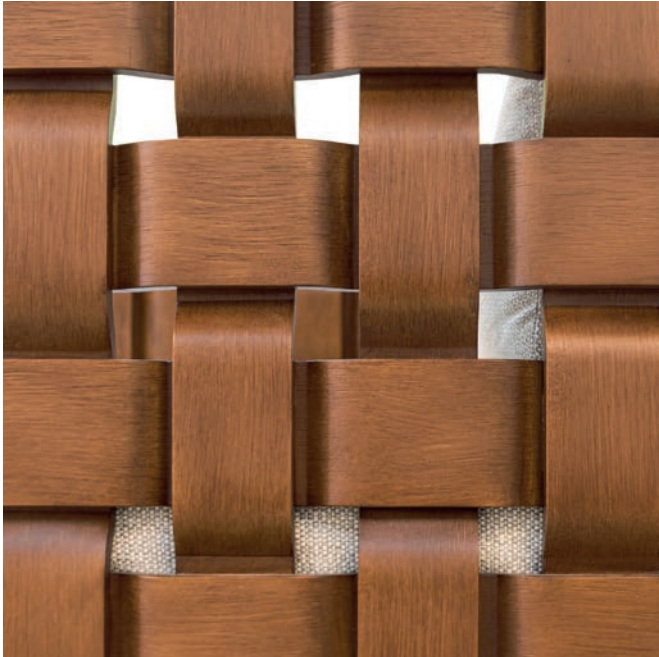

Until now, it has been a problem that furniture made of wood, which is exposed to the elements, requires a lot of maintenance. With the innovative material Resysta, we offer you an alternative that is just as beautiful as wood – but without the time-consuming upkeep.

NATURALNESS:

Resysta offers a truly natural wood look and feel.

MAINTENANCE COMFORT:

No annual maintenance, as with wood, is necessary.

THE VALUE LIES IN THE CRAFTSMANSHIP

The art of creating valuable furniture from wood has evolved over more than a thousand years. This experience and passion that go into the crafting process are reflected in every piece of furniture. Just like real wood, Resysta can be processed in the carpentry workshop, combining tradition and innovation in a unique way.

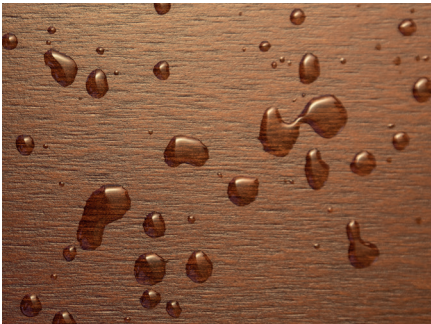

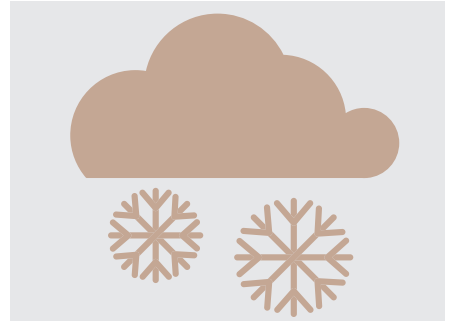

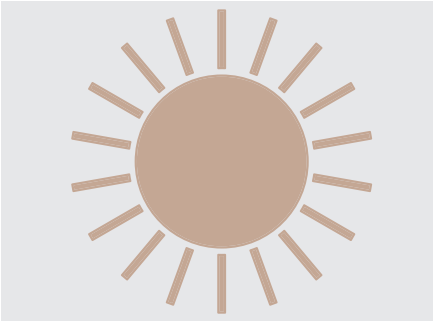

DESIGN DIVERSITY:

The special properties of the material allow for exceptional shaping.

RESILIENCE:

Resysta does not splinter or tear like traditional wood.

The production of the material Resysta is complex and more costly than teak wood. It is a high-tech material and requires specialized knowledge and years of experience for furniture production.

RESYSTA WITHSTANDS EVERY WEATHER CONDITION

Garden furniture is constantly exposed to the elements – UV radiation, rain, or even snow. Our furniture made from Resysta is unaffected by any of these: it can even be used outdoors year-round, as the material is UV- and water-resistant, and does not lose its beauty.

WEATHER RESISTANCE:

The material can stay outdoors year-round.

PEST RESISTANT:

No insect or fungus can damage Resysta.

Teak Wood

After
10 years in
the outdoors.

Resysta®

THE TEAK ALTERNATIVE

Resysta looks like wood, feels like wood, but is the better wood. Expensive teak furniture greys after a short time and starts to splinter. Choose Resysta® furniture instead, which will remain beautiful in outdoor areas for years to come!

DURABILITY:

Resysta retains its beauty for many years.

UV RESISTANCE:

The material does not grey and remains color-stable.

HOW RESYSTA IS MANUFACTURED

The natural fiber material Resysta is largely made from rice husks, a byproduct of the food industry that would otherwise go unused. In a patented process, the silicon contained in the rice husks is combined with recycled polymers through extrusion. This manufacturing process creates the outstanding material.

RESOURCE PROTECTION:

Resysta can be recycled multiple times.

THE MATERIAL FOR GENERATIONS

With Resysta, as the oldest garden furniture manufacturer in Germany, we process this innovative material that meets the challenges of our time.

Our teak alternative not only protects tropical forests, as no trees need to be felled, but we also make a strong statement for sustainable production and responsible action.

SUSTAINABILITY:

Resysta is your contribution to protecting the rainforests.

Make a statement too: Choose Resysta!
The climate and future generations will thank you.

RESYSTA IS THE BETTER WOOD –
AND THAT'S WHAT IT WAS MADE FOR.
